

# **Dynamic Auto Detailing Paint Protection Film General Terms and Conditions**

## **About Paint Protection Film**

Paint protection film is an 8mil film designed to protect your vehicle's paint from paint chip, scratches and swirl marks. It is applied to the exterior of your vehicle paint. It is warranty for 10 years from yellowing, cracking, blistering and delamination. There is no warranty if film or protected panel gets damaged in a accident or from debris.

## **Drying Time**

Your new paint protection film will take 3-4 weeks to fully cure depending on weather conditions. Do not wash your vehicle for 2 weeks and avoid pressure washing edges/seams at all times.

## **Condition of Vehicle for Paint Protection Film Installation**

Vehicles cannot have any paint protection coatings on it such as ceramic coatings. These can affect the effectiveness of the adhesion and may cause lifting, bubbles and other issues. Client is aware that the design of the PPF is for OEM factory paint. The client waives and releases Dynamic Auto Detailing from any warranty or damage claims where a product has been applied to a non-OEM paint surface.

## **Paint**

Paint may lift on repainted panel/OEM paint if improperly prepped and painted. By authorizing Dynamic Auto Detailing to proceed with the install, the client hereby acknowledges the risk, waives any claims against Dynamic Auto Detailing and agrees that Dynamic Auto Detailing will not be liable in the event that damage does occur during the installation process.

## **Paint Chip**

PPF is to prevent your vehicle from future paint chip damage. PPF installation over paint chips will look like contamination after the install due to the unevenness of the paint surface.

## **Installation, Expose Edges, and Seams**

All PPF kits are computer cut using cutting software. Pre-cut kits involve stopping short of edges, edges around badges, washers, and other parts. The customer understands that PPF is a sacrificial layer of your car, not a completely invisible or matte layer. Although we strive to wrap all edges, some cannot be wrapped. Debris build up over time on exposed edges/seams will be more visible on white/light colored vehicles. Partial installs will have more noticeable debris due to exposed edges. We recommend ceramic coating your vehicle to reduce debris build up. There is no warranty or reapplication of film due to debris build up.

## **Headlights**

Headlights are not recommended for PPF installation due to HID feature and exterior coating. By authorizing Dynamic Auto Detailing to proceed with headlight film installation, the customer hereby acknowledges the risk, waives any claims against Dynamic Auto Detailing, and agrees that Dynamic Auto Detailing will not be liable.

## **Film, Badge, & Decal Removal**

Film, badge, and decal removal may cause the paint, glass, and defroster to be damaged. By authorizing Dynamic Auto Detailing to proceed with removal, the client hereby acknowledges the risk, waives any claims against Dynamic Auto Detailing, and agrees that Dynamic Auto Detailing, will not be liable in the event that damage does occur during the removal process.

## **Imperfections**

Though we strive for perfection in our installations, due to the nature of the product, some degree of dust contamination and or minor imperfections are present in every PPF application, also pre-existing flaws, scratches, and rock chips on the paint are often much more noticeable after the PPF is installed. Paint Protective Film will have minor imperfections like orange peel. Used and older vehicle will have more imperfections due to its age.

I have read and hereby acknowledge the terms and condition's of the PPF installation.
